

# RoboPharma Profile

## CINCOTTA DISCOUNT CHEMIST - BLACKTOWN

Wanting the capacity to dispense increased script volumes in a confined dispensary area without comprising an overtrading front of shop, the partners of Cincotta's Group needed a solution to effectively redesign their overall dispensary and workflow management.

Picking a script batch delivered by RoboPharma Conveyor

### Installation Specifics

#### Automation Solution

Automated Dispensing Unit  
RP20/CN500/CL1200  
Capacity for extension module

#### Capacity

Up to 350 different product lines  
Storage of 6000 packages

#### Speed

8 to 10 seconds to deliver complete script batch, irrespective of script size

#### Delivery

High speed elevator connected to  
Transport conveyor to Two (2) drop points  
with (2) additional drop points

#### Software Interface

CDC Systems

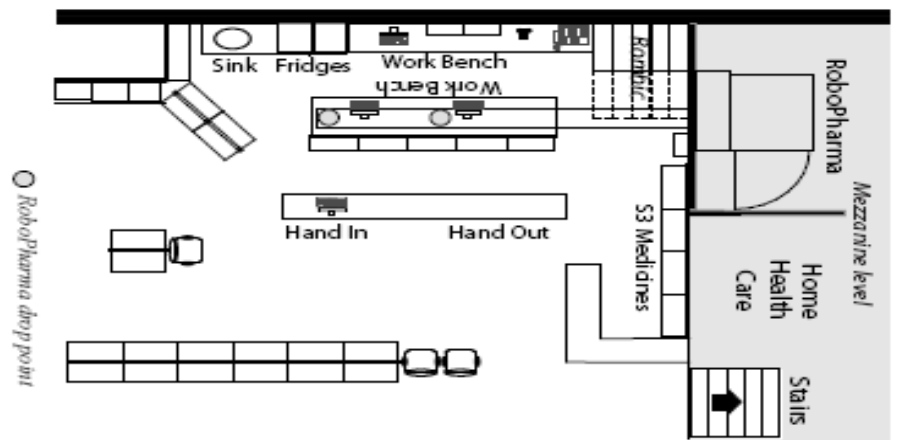

#### Installation Date

May 2009

With the flexibility to be located anywhere within a pharmacy, RoboPharma provided a solution for the automated dispensing system to be installed on a mezzanine floor adjacent the dispensary.

Two remote drop points were custom designed to dispense via a high speed transport conveyor elevated to maximise space and overall efficiency, delivering script batches directly to the pharmacy workbench within 8 to 10 seconds.

Managing partner Paul Riley confirms; "script numbers have significantly increased since the installation and continue to grow along with our front of shop sales". Paul further added "improvements in workflow, space and stock control reinforces the partners decision to install RoboPharma as their dispensing solution".

**Simple & Reliable**  
**Fast & Compact**
